

# Save Time & Money

with **A1 CARDONE** Power Steering Pumps Engineered  
with **MAGNA-PURE™** Filtration System

Debris is a major cause of steering system failure. It travels via power steering fluid throughout the entire steering system, eroding and clogging various components and hoses, leading to expensive repairs.

Flushing is a necessary step to ensure quality repair, however, flushing alone cannot remove 100% of debris. CARDONE has provided an effective filtration system to extend the life of the power steering pump and ensure proper performance over the long haul.

**Recent studies prove that A1 CARDONE Power Steering Pumps engineered with MAGNA-PURE™ Filtration System reduce comebacks on pump replacements by up to 60%.**

## Feature and Benefits:

- MAGNA-PURE™ Filter mesh screening filters up to 130 micron particles.
- MAGNA-PURE™ Filter contains a magnet that collects tiny metallic particles.
- MAGNA-PURE™ Filter System designed with built-in bypass for optimal performance
- The filter is fully integrated into the reservoir, so no hose cutting is required, eliminating the possibility of additional leak points.
- MAGNA-PURE™ pumps are the perfect complement to mechanical flush systems which many shops currently use to save labor. Mechanical flushes are not as effective as the old method of spinning the pump and turning the steering wheel. The MAGNA-PURE™ Filtration System picks up where the mechanical flush leaves off, resulting in optimal performance and reduced labor.
