# Introducing **CARDONE** **Select Power Steering** **Pump 96-6051**

***A new supply solution for vintage applications***

**Problem:** Inadequate core supply and aging applications have created order fill problems.

**Solution:** Capitalizing on decades of experience in steering remanufacturing, CARDONE Engineers began a redesign process that utilized modern pump design to produce a significantly improved pump. This **totally new** option is currently available as 96-6051, and will guarantee continual supply for the remainder of the part number life cycle. 96-6051 covers several vintage application including the '58-'65 Ford Thunderbird and the '64-'65 Ford Mustang. 20-6051FS is also available, in limited supply, for the enthusiast who needs the original pump with original markings.

**The *CARDONE Select* 96-6051 Power Steering Pump features:**

- **Redesigned using a bearing instead of a bushing**
  - Bearing design provides increased durability over the original bushing design
  - Improved durability leads to longer, more reliable pump operation
- **Improved campac design**
  - Complete internal redesign uses a balanced campac instead of the original unbalanced design
  - Balanced campacs generate less heat and significantly increase overall efficiency
  - This design lessens consumption of horsepower, improving engine efficiency and fuel mileage
- **Modern pump design characteristics not available through a remanufactured original**
  - Greatly improved valve and flow controls - ensures consistent flow and pressure characteristics essential for superior steering feel and performance
  - Enhanced seal and o-ring designs – modern designs and upgraded material ensure increased durability in all critical sealing areas
  - Form and fit are identical to the original pump with vastly improved function

***Silent performance***  
***over the long haul.***
