

## Remanufactured **ELECTRONICS**

CARDONE Remanufactured Electronics are the result of years of research and process development aimed at producing the highest quality products in the aftermarket. Reverse engineering provides insight into why a product fails and allows us to improve upon any original design flaws - often resulting in products that perform better than O.E. Computerized testing and on-car validation ensures that every unit meets fit, function and performance requirements.

- Unit is completely disassembled, cleaned and examined for wear and breakage.
- Worn out, missing or non-functioning components are replaced with new or rebuilt components.
- Critical components are re-soldered to ensure superior electrical connections, eliminate intermittent failures and extend product life.
- Faulty O.E. wire inter-connects are remanufactured using ultrasonic wire bonding processes.
- Advanced robotic remanufacturing equipment ensures precision and consistent, high-quality in every part.
