

Remanufactured **FUEL/AIR SYSTEMS**

CARDONE Remanufactured Fuel/Air Products are the result of years of research and process development aimed at producing the highest quality products in the aftermarket. Reverse engineering provides insight into why a product fails and allows us to improve upon any original design flaws - often resulting in products that perform better than O.E. Computerized testing and on-car validation ensures that every unit meets fit, function and performance requirements.

- Each unit is completely disassembled, cleaned and examined for wear and breakage.
- Worn out, missing or non-functioning components are replaced with new or rebuilt components.
- All units are completely disassembled and thoroughly inspected. All standard wear items, including rotating and thrust bearings are replaced.
- Each unit is dynamically tested and calibrated to O.E. performance levels (where applicable).
- Where applicable parts are supplied with required gaskets and mounting hardware.
